DAHLIA HAVEN GARDENS

111

INTERVALE AVE.

EAST PROVIDENCE, R. I.

# We aim to satisfy

We need your co-operation and offer the following for your information.

**Order early** and avoid disappointment should the variety desired be sold out. Orders are filled in the same rotation as received.

**Shipping** We commence shipping tubers as soon as the eyes show up, or about April 1st. Eastern orders are shipped after May 1st, unless otherwise arranged.

**Terms.** Cash with order remittances may be Bank Draft, Post Office or Express Money Order, or Registered Letter at our expense and our risk.

**C. O. D. Orders-** We must decline sending, unless 25 % of the amount is remitted with the order. All Transportation charges as well as charges for returning the money, will be collected on delivery.

**We Prepay All Charges To Destination** when cash is sent with order, in the following states **only**; Delaware, Maine, Massachusetts, Maryland, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, Vermont, Connecticut and District of Columbia.

**Substitution.** The varieties you select are always shipped unless you grant me permission to substitute. If you wish me to use my best judgment, mention it, and I will include a better variety of same color, if possible.

**Size of Bulbs.** -- The size of the bulb or tuber does not in any way designate the size or quality of the flower. Some varieties of dahlias always produce very small bulbs, while other varieties make large ones. Do not consider small bulbs worthless, for they are equally as good and in many cases better than the large ones. Medium and small sized bulbs more often produce the finest and highest colored flowers; and in many cases the best and most effective plants. The only requisite of a Dahlia bulb is the certainty of having one or two eyes or sprouts, and whether large or small, with proper cultivation success is generally assured. A dahlia seed will grow and blossom equally well. It is not the size, but the care and cultivation.

**When to Plant.** I do not recommend planting in this climate until the latter part of May, and to insure a long succession of bloom; planting should be extended until the latter part of June. June planting has proved the most successful in eastern and northern climates.

Cultivation of the ground every week or two will help every bulb or plant wonderfully in its development.
